HUDDLE UP WITH WYRESTORM

When HDBT2.0 meets WyreStorm's presentation switcher platform, the result is a very powerful solution that is perfect for corporate meeting & video conference rooms. Multiple I/O's, condition based relays and USB 2.0 extensions mean an autonomous experience with no user input required and makes it the perfect huddle space solution for Unified Communications, Zoom, Teams, Blue Jeans, etc.

4-INPUT SWITCHING EXTENDER

The EX-SW-0401-H2-PRO brings features of the H2 and PRO into one powerful meeting space solution. Supporting USB routing to both HDMI and DP inputs, this extender accepts HDMI, DisplayPort and USB3.1c sources with a VGA +audio input for legacy devices. Proudly carrying the H2 moniker, it will support 4K content and even HDCP 2.2 protected content.

TWO CONDITION-BASED RELAYS BUILT INTO RX

With autonomy in mind, this "meeting-room-in-a-box" can be configured to automatically trigger motorized devices within the room. The relays will open or close depending on the status of the transmitter, meaning that upon a source connection being made, the meeting room will come to life with projector screens appearing and window blinds closing.

ADDITIONAL RECEIVER INPUTS

When the meeting room is in an idle state, the receiver can switch to either of its HDMI inputs which can be used for anything from a signage player to a satellite receiver, keeping the screen active and displaying content. These inputs can also be triggered manually at any time should a Chromecast or AppleTV be fitted for screen mirroring.

USB 2.0 PASS-THROUGH

HDBaseT2.0 affords the addition of USB 2.0 pass-through, offering not only KVM functionality for extension of a keyboard/mouse or touchscreen but also full data transfer capabilities. Furthermore, allowing 2 host devices to be connected, the extender can route USB traffic depending on the currently selected source at the receiver.
