

THROUGH-HOLE INSTALLATION GUIDE

1

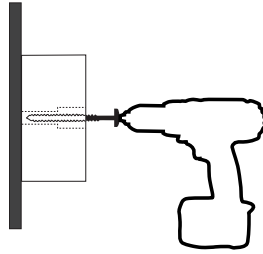

(660w shown)

Many James Loudspeaker's products come with through-holes already built-in for easy installation and are made to accommodate No.8 screws.

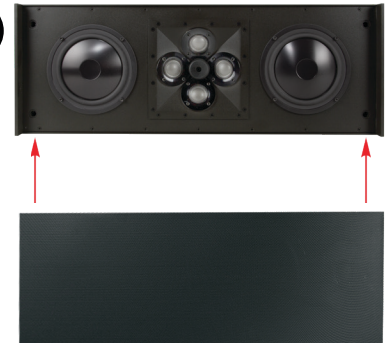

After choosing an installation area, ensure that the speaker is wired correctly (We recommend testing the unit before fully mounting the device).

2

Once satisfied with the level and height of the speaker, secure the speaker to the solid surface of your choosing.

3

Attach the speaker grille to finalize the installation.
